

What if...?

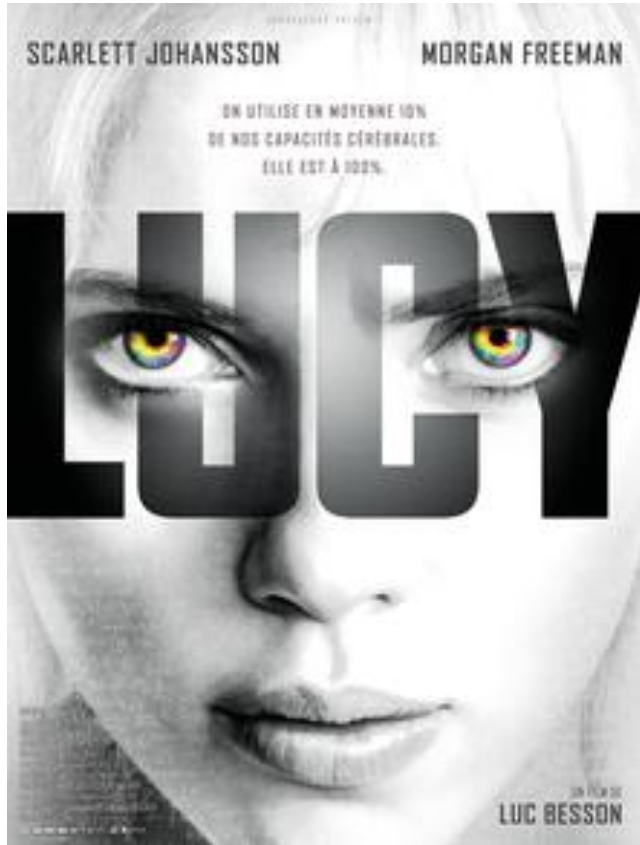

Avatar

This movie left me amazed to see the capability of man to control other organisms with their minds. At the same time, it was intriguing to see that this technology is available today in a lower scale. There are already some studies where scientists implant electronic chips in the brain of disabled people. Those who participate in this experiment get sent an electronic signal to the chip and the chip sends signals to the computer, moving mechanical and virtual objects. So I believe in the next few years we are going to see disabled people gaining access to their capabilities again.

What if?

If Jake can be Lucy, he will use the power of the drugs to heal his legs immediately and run. He will probably choose to do different kinds of extreme activities just to see his physical strength. Another stage of the colonization of his brain will be to have the ability to control other human beings and avenge the death of his brother. Another scenario that I think would be interesting to see is the power of Jake to control people, animals and technology to protect the innocent and to bring justice. Some of the obstacles that this character will have to face is the lack of connectivity and the lack of drug source.

What if...?

Lucy

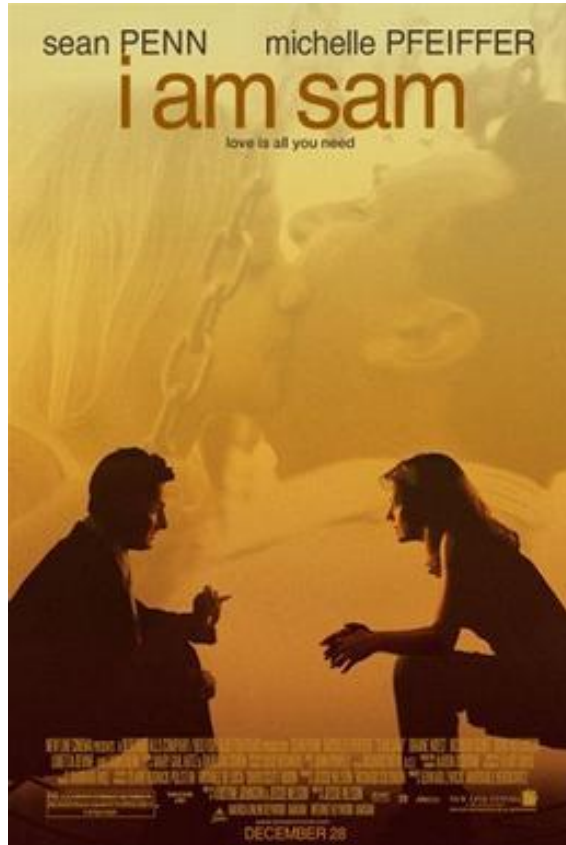

After I watched this movie I feel motivated to use more capabilities in my brain. Sometimes we think we can't do something extraordinary but the brain has the power to learn and expand the abilities of our body because in some way we have unlimited storage.

What if?

What if Lucy can access one hundred percent of her brains and she can be a God. With this power, she can create a new planet with different species. Also, what if she has the ability to talk to the spirit of dead people and bring them back to life again. What if Lucy can go to the past of human history and change drastically the history of the world.

Lucy understands that one of the main reasons for her existence is to share what she learned. Sadly this knowledge is obtained for good or nefarious people. In this scenario Lucy wants to control the damage of the wicked people and promote peace around the universe. It is probably to see other good people helping her to keep the peace in the universe. The main obstacle would be deciding who is worthy to receive the knowledge to expand their abilities and become a God.

What if...?

I Am Sam

After seeing this film I feel compassion and kindness towards the people who have any kind of disability. They didn't choose to have it, but many of them face it with bravery and optimism.

What if?

What if Sam won the lottery? He would probably spend the money to provide tutors for his daughter. What if Sam asked his neighbor Annie to marry him to keep his daughter close to him? What if the lawyer falls in love with Sam and they build a family? What if Sam gets in an accident and he is not able to walk anymore?

The story I choose is the lottery. It may present an easy solution to avoid the drama of losing his daughter because of his disability. However, money also represents a big responsibility and Sam can get into more troubles than solutions because money doesn't solve the emotional or mental disability problems.
